To Whom This May Concern,

I am writing to recommend **Narissara Namkhan** for strong consideration into the Computation Arts program at Concordia University.

I've had the pleasure of teaching Narissara for three courses in the Arts, Letters and Communication program at TAV College. The courses were: Digital Art (Fall 2021), Web Production (Winter 2021), and Communication Media (Fall 2022). Narissara completed all my courses with ease. She stood out from her peers by being highly motivated and by scoring consistently at or near the top of the class.

Narissara was very organized and carried out all her assignments with sincerity. I clearly remember her discussing her ideas with me during every exercise, assignment and project; she was always seeking the best way to convey specific ideas through the imposed constraints. The Arts, Letters and Communication program is heavily multimedia-based, and she maintained this approach regardless of the technical platform. She was comfortable manifesting her ideas through graphic design, photo editing, HTML/CSS programming, sound recording, and video production. In each case, she immersed herself in the discovery process, learned the required technical tool, and ensured the concept was the driving force of her work.

As a graduate of the Computation Arts program, I know what it takes to succeed in this program. Not only does she have the mindset of an artist, she also has strong computer capabilities that will help her succeed. She is among the few students who go through my courses able to synthesize both the technical and artistic aspects of the work. I highly recommend Narissara as a strong candidate and that you allow her the opportunity to continue on this path by accepting her into Computation Arts.

Please do not hesitate to get in touch should you require any more information.

Sincerely,

Jonathan Wilansky
